

Red Hat Enterprise Virtualization (RH-318)

Course Description

Red Hat Enterprise Virtualization (RH318) teaches experienced system administrators how to use the virtualization features of Red Hat Enterprise Linux managed through the Red Hat Enterprise Virtualization suite.

Students acquire the skills and knowledge to effectively create, deploy, manage, and migrate Linux and Microsoft Windows virtual machines hosted on either dedicated Red Hat Enterprise Virtualization Hypervisor nodes or Red Hat Enterprise Linux servers using Red Hat Enterprise Virtualization Manager. With hands-on labs and a deep dive into the technology, this training course is the perfect first step for enterprise planning or executing a virtualization deployment strategy.

This course also helps candidates prepare for the Red Hat Enterprise Virtualization Administrator exam (EX318), which, if passed, earns them the Red Hat Certified Virtualization Administrator (RHCVA) certification.

Duration

4 days

Audience

- Experienced Linux system administrators responsible for managing enterprise servers who are interested in learning how to manage large numbers of servers or virtual machines using Red Hat Enterprise Virtualization
- IT professionals interested in earning a Red Hat Certified Virtualization Administrator (RHCVA) certification

Prerequisites

- IT professionals who have earned an Red Hat Certified System Administrator (RHCSA) certification or maintain the equivalent experience with Linux
- System administration experience on Microsoft Windows operating systems is beneficial but not necessary for this course

Certification Paths

- Red Hat Enterprise Virtualization certification exam (EX318)

Course Topics

Unit 1 - Red Hat Enterprise Virtualization overview

- Understand general virtualization, KVM concepts, and Red Hat Enterprise Virtualization platform.

Unit 2 - Red Hat Enterprise Virtualization Manager

- Install, test, remove, and troubleshoot Red Hat Enterprise Virtualization Manager.

Unit 3 - Red Hat Enterprise Virtualization Hypervisor

- Install, configure, upgrade, and troubleshoot Red Hat Enterprise Virtualization Hypervisor.

Unit 4 - Red Hat Enterprise Virtualization environment configuration

- Create and configure datacenters, clusters, storage domains, and logical networks.

Unit 5 - Red Hat Enterprise Virtualization for Servers

- Install, perform basic management of, and troubleshoot virtual servers and images.

Unit 6 - Red Hat Enterprise Virtualization for Desktops

- Install virtual desktops and configure paravirtualized drivers.

Unit 7 - Virtual machine templates

- Create Microsoft Windows and Red Hat Enterprise Linux virtual machines with template images.

Unit 8 - Pools and users

- Use pools and deploy the user portal with multilevel administrative roles.

Unit 9 - Monitoring and reports

- Monitor Red Hat Enterprise Virtualization and create custom reports.

Unit 10 - Advanced Red Hat Enterprise Virtualization

- Back up and restore Red Hat Enterprise Virtualization; CLI and API interfaces.

Unit 11 - Red Hat Enterprise Linux hosts

- Manage virtual machines with Red Hat Network.

Unit 12 - Migration and high availability

- Migrate a virtual machine and explore high availability

Unit 13 - Comprehensive review

- Apply the performance objectives learned throughout the course
